

**AECOM Comments 8 & 12,  
Comment from Letter on behalf of Harcros/Quapaw**

**Response:** Prior to the lease agreement, ADEQ based the future use on the assumption that the units and many of the buildings would be deemed unusable and therefore demolished. It is ADEQ's understanding that Harcros/Quapaw would like to use the lab buildings. While many structures must be demolished to allow for remedy implementation, the lab area will not interfere. ADEQ has revised Figure 4 to leave the lab are in place.

**Allen Gates Public Hearing Comment**

**Response:** ADEQ will to continue to work with site redevelopers to see that the site can successfully be reutilized in a manner that will be protective of human health and the environment as well as a benefit to the community. In response to your question about whether ADEQ can accommodate a change to a final RADD if conditions change, yes. ADEQ has made revisions, as appropriate, to RADDs issued at sites throughout Arkansas. RADDs can be amended, depending on the nature of the change. To accommodate Harcros/Quapaw in site redevolpment, the final RADD has been revised (see Figure 4) to exclude the demolition of the lab area. ▼

**Deleted:** potential

**Deleted:** Additional public notice periods may be required. No change to the final RADD has been made at this time.¶
